

5th World Launches Regen Tracker: An Innovative Data Platform for Regenerative Property Design

10 December, 2024 — 5th World is proud to announce the launch of Regen Tracker, an innovative data platform designed to empower landowners, designers, real estate professionals, and architects to unlock a property's full regenerative potential. Whether you're working with residential or commercial properties, Regen Tracker provides crucial insights into your land's health status, challenges, and opportunities, setting you on the path to smarter, more regenerative property management.

With an easy-to-use interface and powerful analytical tools, Regen Tracker allows users to explore key property features such as topography, climate, and biodiversity. By leveraging data, expert assessments, and continuous monitoring, the platform provides actionable insights to help design more productive, resilient landscapes—while avoiding costly mistakes.

“Regenerative land design is essential to growing property value, and improving human and ecological well-being,” said Marc Ziade, CEO, 5th World. “Regen Tracker helps users make informed decisions based on reliable data—whether they're looking for land to purchase or managing a complex project. The platform enables landowners and professionals to design smarter by reducing unnecessary labour and maximizing their land's regenerative and resilience capacity.”

Key Features:

Data-Driven Insights: Get comprehensive data on key factors like topography, climate, and biodiversity.

Smart Design Guidance: Make informed decisions on critical areas such as stormwater management, energy harvesting, food production, and site planning.

Comprehensive Monitoring: With ongoing landscape health tracking, Regen Tracker offers continuous feedback to ensure your property remains healthy and productive.

Tailored Packages: With three pricing options (Essential, Comprehensive, and Pro Assessment), Regen Tracker is designed for landowners, designers, architects, and real estate agents to meet diverse needs.

How It Works:

Regen Tracker operates through a simple subscription-based model, starting at \$500 for a one-time Essential package and scaling to more advanced offerings with ongoing monitoring and expert assessments. The Pro Assessment package includes personalized expert guidance, making it the ideal solution for those seeking in-depth, professional insights on property design and management.

“Whether you’re designing your dream homestead, managing a farm, or guiding clients in real estate, Regen Tracker gives you the tools to unlock your land’s full potential,” said Danilo da Rosa, Director of Data Solutions, 5th World. “Our platform provides the essential data you need, along with expert feedback, to ensure your property thrives and adds long-term value.”
